

## Orion WEBserver HMI

Orion WEBserver provides web-based visualization of substation data collected by an Orion Automation Platform.

A browser can connect to an Orion and view data from connected IEDs and RTUs. WEBserver displays can range from a single text-based screen to detailed substation one-line drawings with multiple password protected drill-down screens for viewing IED data or establishing a pass-through connection with the IED. Two preconfigured WEBserver pages for Data Archiving/Sequence of Events Recording and Alarm Annunciation are also available.

### [Orion Web Demo \(Firefox Browser Required\)](#)

View webpages served from an Orion5r showing three Bitronics 70 Series IEDs and an Orion5r operating in a simulated substation. One-line diagram, bay diagrams, hardware overview, text pages, and alarm/sequence of events pages available to view.
